

QA TASK

As a QA Engineer, you are required to write detailed test scenarios and test cases, and perform flow testing for a waste disposal application called DumpHero.

In this application, customers can book a “DumpHero” to collect waste from their house and dispose it.

You need to cover the following customer modules and flows:

1. Customer Onboarding Form
2. Customer Viewing their Hero Requests
3. Customer and Hero Chatting

Your task includes:

- Writing functional test scenarios
- Writing positive and negative test cases
- Validating end-to-end customer flow
- Identifying important validations and edge cases for each module

Make use of the below User stories and Designs for the same

1. Customer - Fills onboarding form

Create your DumpHero customer account

First Name	Last Name	
Street Address		
City	State	ZIP Code
Email		
Mobile Phone		

Payment method

No payment will be charged until a job has been posted, accepted, and completed.
Entering details helps speed up checkout later.

Cardholder Name	
Jane Doe	
Card Number	
0000 0000 0000 0000	
Expiration Date	CVV
MM/YY	***

SUBMIT

GOAL: As a customer, I want to fill onboarding form with email, phone number, and payment method so that my account is secure and ready for seamless transactions

FLOW:

1. User lands on the “Create your DumpHero customer account” page
2. User enters personal details including First Name and Last Name

3. User enters address details including Street Address, City, State, and ZIP Code
4. User enters Mobile Phone number
 - a. Email field is prefilled and non-editable
5. User scrolls to Payment Method section
6. User enters Cardholder Name, Card Number, Expiration Date, and CVV
7. User selects “I have read and agree to Terms & Conditions” checkbox
8. User clicks on Submit button
9. System validates all inputs and verification statuses
10. On success, account is created and confirmation message is displayed

BUSINESS RULES:

1. Input Validation:

1.1 Name Validation:

1.1.1 First Name and Last Name are mandatory

1.1.2 Only alphabets allowed (no special characters except hyphen/apostrophe)

1.1.3 Minimum 2 and maximum 50 characters

1.2 Address Validation:

1.2.1 Street Address, City, State, and ZIP Code are mandatory

1.2.2 ZIP Code - same validation as Hero Zip code

1.2.3 State must be prefilled as Connecticut

1.3 Email Validation:

1.3.1 Email is mandatory

1.3.2 Must follow valid email format (e.g., abc@domain.com)

1.3.3 Email must be unique (not already registered)

1.3.4 Email is considered valid only after verification

1.4 Phone Number Validation:

1.4.1 Mobile number is mandatory

1.4.2 Must be numeric and 10–15 digits (including country code)

1.4.3 Duplicate phone numbers are not allowed

1.4.4 Phone number is considered valid only after OTP verification

1.5 Payment Validation:

1.5.1 Cardholder Name is mandatory

1.5.2 Card Number must be 13–19 digits and pass Luhn check

1.5.3 Expiration Date must be in MM/YY or MM/YYYY format and not expired

1.5.4 CVV must be 3 or 4 digits depending on card type

1.5.5 Payment method must be successfully verified before submission

2. **Terms and Conditions:**

3.1 Checkbox must be selected before enabling Submit button

3.2 Clicking on Terms & Conditions opens the policy page

3.3 If not selected, user cannot proceed

3. **Submission Rules:**

4.1 Submit button remains disabled until all mandatory fields are filled and verified

4.2 On successful submission, account is created and user is redirected to dashboard

4.3 If any validation fails, user remains on the same page with error messages

4. **Field Validations:**

Field Name	Field Type	Placeholder	Type of Content	Notes
First Name	Text	Enter First Name	Alphabets	Mandatory
Last Name	Text	Enter Last Name	Alphabets	Mandatory

Street Address	Text	Enter Address	Alphanumeric	Mandatory
City	Text	Enter City	Alphabets	Mandatory
State	Dropdown	Select State	Predefined	Mandatory
ZIP Code	Text	Enter ZIP Code	Numeric	Mandatory
Email	Email	Enter Email	Alphanumeric	Mandatory
Mobile Phone	Number	Enter Phone	Numeric	Mandatory
Cardholder Name	Text	Name on Card	Alphabets	Mandatory

Card Number	Number	XXXX XXXX XXXX	Numeric	Mandatory
Expiry Date	Date	MM/YY	Numeric	Not expired
CVV	Password	***	Numeric	Secure input

2. Customer - Viewing My Hero Requests

View Details

GOAL: As a customer, I want to view all my requests with their statuses and bids so that I can track progress and take appropriate actions

FLOW:

1. User logs into the platform and lands on the “My Hero Requests” dashboard
2. User views a summary section displaying progress (e.g., jobs completed and progress bar toward next milestone)
3. Empty state: User is shown an empty state design and a redirection to the Request a hero page @Reka
4. Filled state: User views a list of request cards displaying job details
5. Each card shows location, job title, description, price range, and current status (e.g., Awaiting Bids, Bids In, Bid Accepted, Completed)
6. If bids are received, user sees number of bids or accepted bid amount
7. User clicks on “View Details” button on any request card
8. User is redirected to detailed job view page
9. User can click on “Rehire Heroes” from top section for additional actions (will be covered in separate user story)

BUSINESS RULES:

1. **Request Listing Rules:**
 - 1.1 All requests created by the user must be displayed in descending order of latest activity
 - 1.2 Each request card must display:
 - 1.2.1 Location
 - 1.2.2 Job Title
 - 1.2.3 Short Description (truncated if exceeds limit)
 - 1.2.4 Price Range
 - 1.2.5 Status Tag
 - 1.2.6 Bid Information (count or accepted amount)
 - 1.3 If no requests exist, an empty state must be displayed
2. **Status Management:**
 - 2.1 A request can have the following statuses:

2.1.1 Awaiting Bids

2.1.2 Bids In

2.1.3 Bid Accepted

2.1.4 Completed

2.2 Status definitions:

2.2.1 Awaiting Bids → No bids received yet

2.2.2 Bids In → At least one bid received

2.2.3 Bid Accepted → User has accepted a bid

2.2.4 Completed → Job marked as finished

2.3 Status tag color coding must remain consistent across platform

3. **Bid Information Rules:**

3.1 If no bids received → display “0 Bids”

3.2 If bids received → display total number of bids

3.3 If bid accepted → display “Accepted Bid: \$X”

3.4 Accepted bid must override bid count display

4. **Progress Tracker Rules:** (Will be detailed in separate user story)

4.1 Progress bar reflects number of completed jobs toward next milestone

4.2 Progress data must be dynamically calculated based on completed jobs

4.3 If milestone reached → system updates badge/level (e.g., Clutter Crusher → next level)

4.4 Progress text (e.g., “X jobs to go”) must update in real time

5. **Navigation Rules:**

5.1 Clicking “View Details” opens detailed request page

5.2 Clicking “Rehire Heroes” redirects to new request creation flow

6. **Data Handling Rules:**

6.1 All request data must be fetched via API and cached for performance

6.2 Updates (status, bids) must reflect in near real-time or via refresh

6.3 If API fails, error state must be displayed with retry option

7. **UI Behavior Rules:**

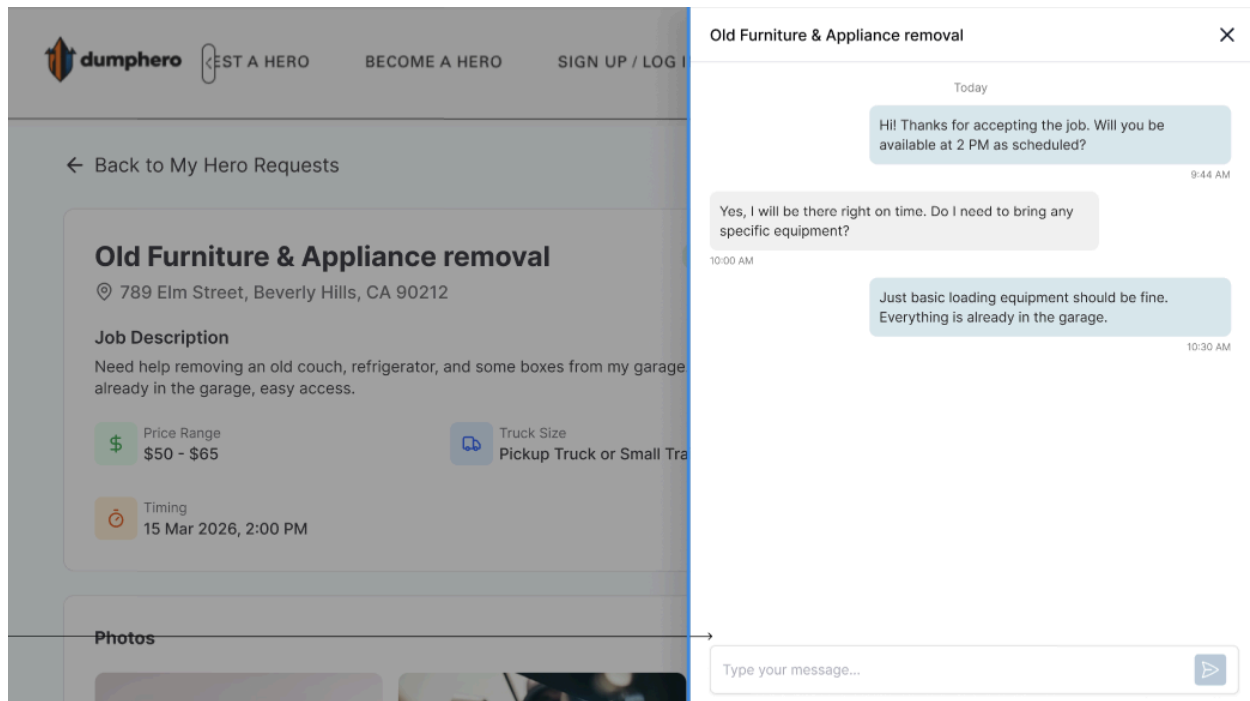

7.1 Cards must be responsive and adapt to screen sizes

7.2 Description text must be truncated after defined character limit (e.g., 100–150 chars)

7.3 Price range must always display in currency format

7.4 Buttons must remain enabled only when actionable

3. Customer - Chats with Hero post Bid Acceptance

GOAL:

As a customer, I want to chat with the assigned hero after bid acceptance so that I can coordinate job details while ensuring communication remains within the platform.

FLOW:

1. User navigates to **My Jobs / Job Details** page.
2. User views job status as **"Bid Accepted"**.
3. User sees **"Chat Now"** button under assigned hero section.
4. User clicks on **Chat Now**.
5. Chat window/modal opens displaying:
 - Conversation history (if any)

- Input field for typing messages
- 6. User types and sends a message.
- 7. System validates message content before sending.
- 8. If message passes validation:
 - Message is sent to hero
 - Displayed in chat thread
- 9. Hero responds via their interface.
- 10. Conversation continues in real-time.

BUSINESS RULES:

1. Chat Availability

1.1 Chat is enabled only when:

- A bid is **accepted**

1.2 Chat is disabled for:

- Pending jobs
- Cancelled jobs
- Completed jobs (optional: read-only access allowed)

2. Messaging Rules

2.1 Messages must be sent and received in real-time (or near real-time).

2.2 Messages must display:

- Sender name
- Timestamp

2.3 Messages must persist across sessions.

3. Content Moderation (Critical Rule)

3.1 System must scan all outgoing messages before sending.

3.2 The following content must be **blocked or flagged**:

- Phone numbers
- Email addresses

3.3 Detection rules:

Content Type	Validation Rule
Phone Number	Detect numeric patterns (e.g., 10+ digits, formatted numbers)
Email Address	Detect standard email format (e.g., text@domain.com)

3.4 If restricted content is detected:

- Message is **not sent**
- User sees error message

4. Error Messages (Content Restriction)

Scenario	Error Message
Phone number detected	“Sharing phone numbers is not allowed. Please use in-app chat.”
Email detected	“Sharing email addresses is not allowed.”

Multiple violations	"Your message contains restricted contact information."
---------------------	---

5. UI/UX Rules

5.1 Chat opens as modal or side panel (as per design).

5.2 Sent and received messages must be visually distinct.

5.3 Input field must support:

- Text input
- Send button

5.4 Chat must auto-scroll to latest message.

6. Notifications

6.1 Hero receives notification on new message.

6.2 User receives notification on hero reply.

6.3 Unread message count may be displayed.

7. Edge Cases

Scenario	Behavior
User sends restricted content repeatedly	Show error each time, do not send
Network failure	Show retry option

Chat not loaded	Show loader or error state
User exits chat	Messages remain saved

8. Security & Compliance

8.1 All chats must be stored securely.

8.2 Messages may be logged for moderation/audit.

9. Data & Performance

9.1 Chat should support pagination or lazy loading for long threads.

9.2 Messages must sync across devices.
